1 Opis skupa podataka

The Million Song Dataset [7] je skup od milion slogova koji sadrže informacije o popularnim pesmama. S obzirom da ovaj skup preveliki za udoban rad, ograničićemo se na podskup od deset hiljada slogova izdvojen od strane autora originalnog skupa.

Svaki slog pomenutog skupa podataka sadrži informacije o jednoj pesmi: detalje o izvodjaču, segmentima, tempu kao i ID pesme na raznim online servisima (*Echo Nest* [2], *7digital* [1], *MusicBrainz* [4] i *PlayMe* [5]). Detaljne informacije o atributima se mogu videti na slici 1.

Skup u svojoj originalnoj formi je organizovan u *HDF5* format [8]. Mi ćemo izdvojiti informacije iz datog modela i podatke organizovati u CSV format, zarad lakšeg ubacivanja u alate koje ćemo opisati kasnije. Ova transformacija je izvršena korišćenjem Python skripti iz MSongsDB repozitorijuma [3], modifikovanih za naše potrebe. Kompletne skripte se mogu naći u A.
